

PaperWave BioCor® VCI Corrosion- and Transport Protection

PaperWave BioCor® VCI is the first paper air cushion with integrated bio-based corrosion protection. In a MetPro Group & Floeter Verpackungsservice GmbH cooperation, we offer an environmentally friendly and professional solution for the transportation of automotive components and metallic parts.

BioCor® has provided reliable corrosion protection on a natural basis since 2014 and has already been awarded the “Brand of the Century” prize twice by DIE ZEIT Verlag.

Corrosion Protection during transport

PaperWave® BioCor® VCI are highly developed special air cushions with integrated corrosion protection.

MetPro's BioCor® VCI technology is the leading corrosion protection formula, that reliably protects many metals against corrosion over a long period of time. BioCor is consistently optimized according to occupational health aspects and is therefore preferred by leading metal processors. We have impregnated our approved PaperWave air cushions with BioCor® -VCI to offer the industry a valuable and sustainable alternative to VCI plastic air cushions. They can be easily disposed of with the waste paper.

99% air - 100% AirWave transport protection with 100% MetPro BioCor® corrosion protection.

AirWave type 7 for void filling and type 8 for wrapping
