

WINDING UNIT FOR EXTRA-LARGE
SUPER INFLATED AIR CUSHION FILMS –
Mobile Coiler Unit

The mobile winding unit with integrated compressor allows the fast processing of wide air cushion films from FLOETER (420/600/840mm). The reliable sensor technology stops the operation when the roll is full.

Automation for a wide range of applications

The system includes a special designed AirWave2 inflation unit, a compressor and a mobile coiler stand with sensor technology. It can be used for processing all materials, widths and thicknesses of film.

See the coiler application in motion:

More efficiency with packaging solutions from FLOETER

While your team can prepare the goods to be packed simultaneously - the reliable sensor technology detects the maximum winding diameter and stops the operation to allow the discharge of the big inflated bobbin. A pressure value is used to control the output of the compressor for individual air cushion.
