# AirWave ClimaFilm-100 ClimatePartner certified

ClimaFilm-100 air cushion film is made from 100% recycled materials, 82% of which is collected post consumer plastic.

Not all recycling is the same: pure waste from industrial production (PIR) is often used for the production of films because it is easy to process. FLOETER, goes one step further and uses 82% PCR - these are plastics that have really been used in a product before, then collected, washed, sorted and processed. The generated recycleate is later added back to the film.

**This is what real sustainability looks like!**
